INSTALLING 'NAPA' on a PC running WINDOWS 64 bits. (*Windows 10 or 11***)**

> **Choose the disk where you will place and run NAPA**.

**** Step 1 ****
Unzip '**Simulate.zip**' with 7-ZIP, using the password you have received.
Unzipped directory '**Simulate**' MUST be moved as '**Simulate**' on the **root** of the disk.

**** Step 2 ****
In '**.\Simulate\InstallDos**', launch '**INSTALL.bat**' to install the NAPA
environment and to create the shortcuts '**Napa Vineyard**' and '**Napa Vineyard – Mini**'
on the desktop of your computer.

>>> Your PC will be possibly automatically restarted. In this case, you will have
>>> to launch again '**INSTALL.bat**' to complete the installation.

**** Step 3 ****
Click to the icon '**Napa Vineyard**' or '**Napa Vineyard – Mini**' on the desktop.
It is then preferable, although not mandatory, to change the appearance by choosing
'medium icons' or 'large icons'.

**** Step 4 **** -- TEST --
Click on '**Editor Crimson for Napa**'.
Open file '**Simulate\InstallDos\TEST\test.nap**'.
Press 'Alt R' to start a simulation. The simulator NAPA should run.
You will receive then some instructions to produce a first plot.

**** Step 5 ****
It is time to read the file '**Simulate\NapaDos\Doc\NAPA_TEASER.pdf**'.
It can be accesses from the '**Napa Vineyard**' panel.

**** Step 6 ****
Last but not least, send your Email address to *yves.leduc.be@gmail.com*
You will be informed as soon as a new release is available or if a bug has been
discovered. The author will be pleased to answer to your questions.

ENJOY !
