Find And Replace Text v1.99b

by Lionello Lunesu

Usage: FART [options] [--] <wildcard>[,...] [find_string] [replace_string]

Options:

-h, --help	Show this help message (ignores other options)
-q, --quiet	Suppress output to stdio / stderr
-V, --verbose	Show more information
-r, --recursive	Process sub-folders recursively
-c, --count	Only show filenames, match counts and totals
-i, --ignore-case	Case insensitive text comparison
-v, --invert	Print lines NOT containing the find string
-n, --line-number	Print line number before each line (1-based)
-w, --word	Match whole word (uses C syntax, like grep)
-f, --filename	Find (and replace) filename instead of contents
-B, --binary	Also search (and replace) in binary files (CAUTION)
-C, --c-style	Allow C-style extended characters (\xFF\0\t\n\r\\ etc.)
--cvs	Skip cvs dirs; execute "cvs edit" before changing files
--svn	Skip svn dirs
--remove	Remove all occurrences of the find_string
-a, --adapt	Adapt the case of replace_string to found string
-b, --backup	Make a backup of each changed file
-p, --preview	Do not change the files but print the changes
